Spill Control Funnels

Large diameter funnels provide a simple, cost effective way to collect liquids and keep drum tops clean.

- Low profile, wide diameter offers big “target” for quick and easy pouring. Allows the use of an optional Drum Fill Gauge.
- All polyethylene construction resists most chemicals.
- Elevated, scalloped design keeps containers from resting in their own liquid and permits passive draining of paint cans, filters, and other containers.
- Moulded inside hook offers a convenient spot to hang the optional Funnel Cover.

Emergency Deluge Showers are designed for hot, exposed locations where, by insolation (heating from solar radiation), the water in ordinary showers can be heated well beyond the limits of safety. The maximum safe water temperature is considered to be 35°C. Not only can scalding be a problem but hot water can open pores to allow greater contaminant ingress and, in some cases, it can accelerate reactions with adverse effect.

The principle is simple. It works like the old canvas water bag. The supply line is jacketed with a percolating hose which allows water, seeping through, to evaporate from the outer surface. The jacket and the water it contains insulate the supply water and, at the same time, latent heat is removed by evaporation, from the whole assembly. It is by these means that the supply water is kept cool and comfortable.

The supply water is held static in the supply tube. A needle valve allows water from the supply tube to enter the jacket from which it percolates to the outside surface and evaporates to atmosphere. This avoids wastage of water when to maintain cool conditions, it is allowed to trickle from the systems. It overcomes the dangerous and avoidable time delay encountered when dry pipe showers are employed.

COMFORT COOL UNITS AVAILABLE:

Model number - DC045C
Free-standing, combination emergency ‘Comfortcool’ deluge system consisting of an overhead 200mm stainless steel deluge head operated through a 316 stainless steel ball valve, by a stainless pull rod and an eye wash unit giving aerated, cleansing flow from two stainless projectors mounted on a stainless basin. Operation of the eye wash is by means of a push flag handle at the side of the bowl and/or stainless foot lever. Both aerators are fitted with ‘fly-off’ protective covers. This unit incorporates the patented ‘Comfortcool’ principle needed for outdoor applications.

Water connection: male 1 1/4" B.S.P.
