Pink Sheets: OTMN

A New Porphyry Target

O.T. announces that a new porphyry copper-molybdenum target has been recently developed on its Ruby Property in Jefferson County, Montana.

This new "Dry Gulch" target is south of the North Area and appears to be about the same dimension and orientation as the North Area Matrix IP anomaly. The rocks in this "Dry Gulch" area lie at 100 to 700 meter depths and produce a strong Titan 24 chargeability high. Additional evidence suggests that this could be the core of the porphyry system.

A report prepared by Fess Foster, Ph.D., CPG is being posted on O.T.'s web site: www.otmining.com. To view, go to O.T.'s Home Page under Latest Updates.
